💼 Work

1. What DepoVaultTick Is

DepoVaultTick is a personal Android app that keeps a household's important information in one place — and keeps it **private**. It tracks family savings and investments, reminds you before anything matures or falls due, keeps notes and daily expenses, stores sensitive secrets behind their own lock, and includes small tools for work such as an invoice maker and a contact book.

Everything lives **on the phone itself**. There are no accounts, no sign-ups and no cloud servers. When you want a copy elsewhere, the app creates a password-protected backup file that only you can open again.

The idea in one line

A bank passbook shelf, a diary, a sticky-note board and a small safe — all in one locked app, with colour-coded warnings so nothing important is ever missed.

2. At a Glance

Type	Personal App Project (built for the owner's own use)
Platform	Android phones
Built with	Flutter and Dart
Look and feel	Light theme with a deep charcoal-navy and fresh-green brand palette; rounded cards; short sound effects (can be muted)
Where data lives	Only on the device — no cloud, no login
Protection	App Lock (three different secrets), a separate Stash Lock, optional fingerprint / face unlock, encrypted backups
Reports and exports	Dashboards with charts, Excel and CSV exports, PDF invoices and receipts, encrypted backup file

Size	About 77 source files and roughly 91,000 lines of Dart code
------	---

3. The Map of the App

The bottom bar has five places — Vault, Notes, Home (the raised centre button), Log and Stash. Work is reached from Home.

Section	What it is for	Reached from
Home	The hub: shortcuts to everything, the notification bell, backup Import / Export, menu and sound switch	Opens after the splash screen
Family & Vault	Each family member's bank deposits, insurance policies, Post Office savings and mutual funds, with maturity and due-date warnings and family-wide dashboards	Home or bottom bar
Notes	A corkboard of coloured sticky notes with bold / italic / underline / strike-through and bullet lists	Home or bottom bar
Daily Log	A personal expense tracker plus a calendar of reminders, bills, birthdays and everything coming up across the whole app	Home or bottom bar
Stash	A private keeper for passwords and PINs, behind its own lock and a deliberately bland name	Bottom bar
Work	Invoice generator, a Rolodex contact book, and a Certificate & License tracker with expiry reminders	Home
Notifications	One combined "what needs my attention?" list from every section	Bell on Home
Privacy Settings / About	Set up locks; read a swipeable guide to the app	Menu on Home

4. Design Principles

- **Private by default.** Nothing leaves the phone unless you choose to export or share it.
- **Tell me before it's a problem.** A red dot means act now; a yellow dot means due soon. The same two colours are used everywhere, from the Home logo to individual deposit cards.
- **Always up to date.** Totals, statuses and due dates are worked out fresh from the raw facts each time, so they can never drift out of sync with what you entered.
- **One consistent feel.** Every screen shares the same header bar, footer, date picker, clock picker and click sounds.
- **Forgiving but careful.** Optional fields can be filled in gradually; risky actions (like deleting a bank with all its deposits) ask twice.

5. How Information Is Kept Safe

Layer	What it does
App Lock	Guards the whole app. Three secrets are set up together — a 6-digit PIN, a swipe code and a tap rhythm — and one is asked for at random each time
Stash Lock	A separate PIN-and-pattern lock for the Stash, asked every time something sensitive happens there
Biometrics	Optional fingerprint / face unlock as a faster door in. The app never sees or stores biometric data
Lock on return	Leaving the app and coming back brings the lock screen straight back
Encrypted backup	Backups are locked with a password you choose. A forgotten backup password cannot be recovered — on purpose

6. Guide to This Document Set

#	Document	Covers
01	Setup & Startup	Packages, Android build, theme, splash screen
02	Home Screen	The hub, badges, bell, backup buttons
03	Notifications & Alerts	The bell list and the red / yellow warning system
04	App Lock & Privacy	The three-secret lock, biometrics, settings, About
05	Family & Banks	Family list, member pages, banks, dashboards picker
06	Deposits	Fixed and Recurring Deposits and their dashboard
07	Insurance	Policies, premiums and the dashboard
08	Post Office	Savings schemes and the dashboard
09	Mutual Funds	SIPs, lump sums and the dashboard
10	Daily Log	Expenses, reminders, calendar and dashboard
11	Notes	The sticky-note corkboard
12	Stash	The private secrets keeper
13	Work — Invoices	The invoice wizard, saved invoices, dashboard
14	Work — Rolodex & Certificates	Contacts and certificate tracking
15	Backup, Export & Import	Encrypted backups and spreadsheet exports
16	Shared Building Blocks	Storage, sound, pickers and common widgets
