Gate

1. What It Is

Home is the first real screen after the splash. It holds none of your records itself; it is a launchpad showing a logo, the app name, a notification bell and a stack of large buttons. It also hosts the app-wide **Import / Export backup** buttons, because a backup touches every section rather than belonging to just one.

2. What You See

Element	What it does
Logo	Changes with the app-wide status: normal logo when all is clear, a yellow version when something is due soon, a red version when something needs action now
Notification bell	Opens the combined alert list. Shows a red or yellow badge and gently shakes every few seconds when something needs action now
Menu	Privacy Settings and About App
Speaker icon	Mutes or unmutes interface sounds for the whole app (remembered between launches)
Log Out	Locks the app again after a confirmation
Family & Vault	Track deposits, recurring deposits and maturity dates — with a red / yellow badge
Notes · Work	Side-by-side shortcuts to the Notes board and Work tools
Daily Log	Recurring daily entries — with its own red / yellow badge
Import · Export	Restore from, or create, an encrypted backup
Legend	A small key: red = “Needs action now”, amber = “Due soon”

Element	What it does
Footer bar	Vault, Notes, Home, Log and Stash tabs

3. The Unlock Gate

Unlike Family & Vault or Daily Log, which ask for their own check only once per app open, Home checks the main App Lock **every time the app comes to the foreground** — the same way a phone's own lock screen works. Until it is passed, none of the action buttons or footer even appear; only the menu, sound switch and Log Out remain, so someone can still reach Privacy Settings to set a lock up or leave without unlocking.

Situation	What Home shows
No App Lock set up yet	Home stays closed and shows a "Set Up App Lock" prompt. It never opens unprotected
Lock set up, not yet passed	The unlock challenge appears; if cancelled, a simple "Unlock" prompt remains
Passed this visit	Full Home with buttons, badges and footer
Recovered via "Forgot Password"	Home opens for this visit, but without the usual session-long trust

4. How the Badges Are Worked Out

Home reads a summary of the rest of the app only long enough to pick badge colours:

- **Family & Vault badge** — the most urgent state found anywhere under deposits, insurance, Post Office and mutual funds.
- **Daily Log badge** — unpaid expenses, overdue reminders and due SIP payments.
- **Bell and logo** — computed from exactly what the Notifications screen's Missed, Today and Tomorrow tabs would show, so the bell can never disagree with the list behind it. Red when Missed or Today has anything; yellow when only Tomorrow has something.

Badges refresh whenever you return to Home from another screen, so they are never stale.

5. Backup Buttons

Export

1. Choose what to include with a checklist (everything is ticked by default).
2. Set a **backup password**. The app warns that a forgotten password cannot be recovered.
3. A progress message shows while the encrypted file is built.
4. Choose **Save to Device** or **Share** (email, Drive, WhatsApp...).

Import

1. Pick one or more backup files. Files that aren't genuine backups are skipped immediately.
2. Enter the password(s).
3. Choose **Merge** (keep what you have, add what's new, review conflicts) or **Replace** (wipe and load the backup, with an extra confirmation).

Full details are in the Backup, Export & Import document.

6. Footer Navigation

Tapping another tab moves to that section. When you return, Home reloads its badges so edits made elsewhere (a deposit marked closed, a premium paid) show immediately.
