1. How Family & Vault Is Organised

Family & Vault is built around **people**. Each family member has their own folder, and inside it sits everything that belongs to them:

Level	Contains
Family member	A name, plus everything below
→ Banks	Each bank where the person holds deposits
→ Deposits	Fixed and Recurring Deposits inside each bank
→ Insurance	Policies linked to the person
→ Post Office	Savings-scheme entries linked to the person
→ Mutual Funds	SIPs and lump sums linked to the person

Deposits live nested under banks; insurance, Post Office and mutual fund records are kept as flat lists that simply point at a member. All totals are calculated live from this data, never stored separately, so they can't drift out of date.

2. The Family List

The landing screen of the whole section. A quick PIN check guards it every time it opens (a lighter check than the full unlock, skipped if already passed this session). It has three parts:

- **Rotating totals panel** — family-wide totals for Deposits, Insurance, Post Office and Mutual Funds, one category at a time.
- **“Next Up” panel** — the single most urgent item across every member and every category, rotating through whichever categories have something coming. Urgent items (overdue, or due today / tomorrow) always get a turn; calmer items appear only if they fall within roughly a

month. Tapping it opens a full **Upcoming** list showing absolutely everything, however far away.

- **A card per member** — each with a small red / yellow pill counting how many of their items are overdue or due soon across all four categories.

Two small rules worth knowing

“Matured” never ages into a separate “very overdue” label — a matured deposit just stays Matured until you act on it. A recurring payment, by contrast, is “Due Today” only for the one day it is due; after that the schedule quietly moves to its next cycle.

3. Exporting to Excel

Option	What happens
Export All Family	Builds one Excel workbook for everyone immediately
Export Selective Family	Opens a checklist of members; tick the ones you want and press Confirm Export (a “Preparing Export...” spinner shows meanwhile)

The workbook has one tab each for Deposits, Post Office, Insurance and Mutual Funds, with the same columns in the same order as each section’s own export, then opens the phone’s Share menu. If something fails, a short message appears instead of a crash.

4. Adding, Editing and Deleting Members

A single form with one box — **Full Name** — used for both adding and editing. When editing, existing banks and deposits are left untouched.

Deleting a member asks twice

Removing a person also removes every bank and deposit under them. A first dialog spells out exactly how many banks and deposits will be lost; if you still agree, a second, sterner “this cannot be undone” dialog follows. Only then does the deletion happen.

5. A Member’s Category Page

Tapping a member opens four large square tiles — **Deposits, Insurance, Post Office, Mutual Fund** — each showing its own red / yellow badge, refreshed every time the page is shown. A Dashboard button in the top corner opens the dashboards already filtered to just this person.

6. A Member’s Banks

- **Summary:** number of deposits, total principal (money originally put in) and total maturity value across all of the person’s banks.

- **Alert banner:** the single soonest item across every bank — either a deposit maturing or, for Recurring Deposits, the next instalment due. If several share that exact date, all are shown together. Tapping opens an **Alerts** popup grouped by date.
- **Bank cards:** each with its own mini-summary and a due-soon flag.
- **Edit mode:** switched on with the pencil in the “BANK” header; each card then offers rename or delete.

Compact account numbers. When two deposits at one bank fall on the same alert date, their numbers could clutter a small card. If they share a long common beginning, the shared part is written once followed by only the differing ending; otherwise each is simply listed in full, so nothing is hidden or merged confusingly.

Add / Edit Bank is a one-box form (the bank’s name). Renaming only changes the name — every deposit stays attached. Deleting a bank removes all its deposits, so it asks for confirmation twice.

7. The Dashboard Picker

Four square tiles — Deposits, Insurance, Post Office, Mutual Fund — each opening that section’s dashboard. Opened from a member’s page, every dashboard starts with that member already selected; opened from the main list, they start with everyone.
