Monthly SIP

Lump sum

|| Stop / Resume

Dashboard

1. Two Kinds of Investment, One Shape

	Monthly SIP	Lump Sum
What it is	The same fixed amount invested every month, for a set number of months — like a standing instruction	One amount invested once, nothing recurring
Amount means	Per month	The whole amount
Dates	Start date and number of instalments	The date it was invested
Pause history	Yes	Not applicable

Each entry also links to a family member. Fields that only make sense for one type are filled only for that type.

2. What Stopping a SIP Really Means

People sometimes pause a SIP — a bank change, a tight month — and restart later. The app never deletes or shortens the plan. Instead, every month that falls inside a **stopped window** is simply skipped when counting instalments, and the whole schedule shifts later by the length of the pause.

Example

A 12-instalment SIP paused for 3 months still completes all 12 instalments — they just land 3 months later than originally planned.

Most of the trickier logic in this section exists purely to work this out correctly.

3. A Member's Mutual Fund Page

- **Three headline numbers** — amount invested so far, number of Monthly SIPs, number of Lump Sums.
- **“What’s next” alert** — the soonest SIP instalment due, or the soonest SIP about to finish its last instalment. If both fall on the same day, both are shown.
- **A table of entries** — type, amount invested so far, and date.
- **Edit mode** via the pencil next to “MUTUAL FUNDS”, plus a “+” and a floating Add button.

All members’ mutual fund entries are kept together in one list in storage (unlike deposits, which nest under people). This page loads the combined list, shows only this member’s rows, and merges changes back carefully so nobody else’s entries are lost.

4. Adding or Editing an Entry

1. Pick the type at the top; the fields below change to match.
2. Choose the family member — this dropdown is hidden when the screen is opened from that member’s own page.
3. For a SIP: enter the monthly amount, start date and instalment count. A **live preview** shows the 1st instalment, the next one and the very last.
4. For a Lump Sum: enter the amount and investment date.
5. When editing a SIP: use **Stop** to record a pause and **Resume** to record its end, building a running history of stop / resume windows.

Pausing never changes the plan’s start date or instalment count; the schedule simply shifts.

5. The Mutual Fund Dashboard

Part	What it offers
Filters	Family member(s), category (SIP / Lump Sum / both), and a From / To date range
Insights page	A rotating alert card showing which SIPs need attention, and a month-by-month calendar of upcoming and past instalments
Summary Table page	A plain list of every entry with running totals
Excel export	Through the Share menu, with a “Monthly SIP / Lump Sum” dropdown in the category column

- **Six alert statuses.** Every SIP lands in exactly one — for example “Due Today” or “Completing Soon” — based on whichever of its two key dates (next instalment or completion) comes first. A SIP merely finishing is treated as informational, never a red or yellow alert.
- **Walking the calendar.** Several routines step month by month, skipping paused months, to answer “how many instalments have happened?” and “which day does it land on in this month?”.
