 Reminders

 Dashboard

1. What It Is

Daily Log is separate from the family money tracking elsewhere in the app. Think of a simple chequebook register combined with a wall calendar you can scribble birthdays, appointments and bill due-dates onto. Everything is saved on the phone the moment it changes.

2. What It Keeps

Item	Details
Expenses	Amount, spending category, optional note, date, and whether it is Paid or still Due
Categories	Coloured icon chips. Some are built in (Water, Milk, Groceries, Fuel, Rent...); you can add your own with a name, icon and colour, and rename or delete them
Events and reminders	Birthdays, appointments, to-dos and recurring bills, each with a date and an optional repeat rule (daily, weekly, monthly, yearly) and an optional “stop repeating after” date
Payment reminders	A reminder can be a “Payment” type: it carries its own amount and category and appears in the same Due list as an unpaid expense until marked paid — separately for each occurrence if it repeats

3. The Screen

- **Hero card** — this month’s running spend, with arrows to flip months and a **Today** shortcut.
- **Calendar card** — shows a Day, a Week or a whole Month, with small coloured dots and badges showing money spent, something due, or a reminder.

- **Legends** — a toggle that pulls upcoming activity from Deposits, Insurance, Post Office, Mutual Funds and Certificates onto the same calendar, so Daily Log doubles as a one-glance view of everything coming up across the app.
- **Day detail** — tap a date to see every expense and reminder on it, with buttons to add, edit or delete.
- **Add forms** — the floating “+” and header buttons open pop-up forms for a new expense or reminder.
- **Due** — every unpaid expense and unpaid Payment reminder in the month in one combined list, each with a one-tap **Mark Paid**. It also hosts the “Set Notification Reminder” button for the Daily Expenses Due schedule.
- **Transactions** — a receipt-style list of the month’s expenses with a spending-by-category breakdown, and a button to export the month as a printable **PDF receipt**.

4. Tricky Ideas, Explained

Why repeating payments need “paid” tracking per occurrence

A one-off reminder needs one yes / no. But “Rent, every month” comes round again and again — March being paid says nothing about April. So every settled occurrence is recorded by its own date, and any occurrence that has come and gone unpaid appears as its own “missed” line. Two months of unpaid rent show as two rows, not one.

- **Older saved reminders** that only had a single paid flag are upgraded sensibly: if marked paid, only the very first date counts as settled and later repeats start fresh; if unpaid, nothing is pre-filled, so every missed period correctly shows as due.
- **Icons are saved as simple numbers** (a position in a fixed list) rather than as icon data, because the release build process can strip icon data that isn’t referenced by name. New icons are therefore only ever added at the end of the list.

5. The Daily Log Dashboard

A report over whatever was last saved in Daily Log. It reads the same on-device storage directly, so it always reflects the latest data without Daily Log needing to hand anything over.

Part	What it offers
Date filter	Start and End date; leaving either blank means “no limit on that side”
Insights page	Stat tiles and charts
Summary Table page	A filterable table of every transaction, plus separate Events and Reminders tables
CSV export	Every table can be exported as a spreadsheet-ready file through the Share menu

Recurring payments become real lines. “Rent, due the 1st of every month” represents many due dates over time. For charts and totals, each due period is worked out — which are paid, which are outstanding as of today — and turned into its own entry. Events, to-dos and birthdays carry no money, so they appear only in their own tables, never in the totals.
